Current
JULY 2016

Technology Associate at BOHIYAANAM TECHNOLOGY PVT LTD, PUNE

Web Expanse Project

- Redesign and development of the website previously based on JSF, using Angular 6 as frontend, Spring Boot as the middleware and TIBCO as a backend for REST web services.
- Part of the team responsible for the Angular frontend of the website.
- Developed two template decorators used for generating request JSON for webservices from typescript objects and extracting the required response object received from webservices.

Schoolwards

- Schoolwards is an school management and security system which facilitates as a client to which data in form of homeworks, attendances, timetable, etc is served by either school's administrator or teacher's using a web-based panel.
- Part of the team responsible for development of the android application of this system.
- Responsible for development of the iOS application of this system.

RKB Nityakram

- RKB Nityakram is an iOS application which enables users to take advantage of iTunes file sharing feature and add songs/tracks to the sandbox directory of the application and the application also provides features for playback and management of playlists of the said uploaded songs/tracks.

Schoolwards Messaging Module

- A messaging module specifically developed so as to be integrated into the school applications, to create a two way communication between parents/users and teachers. This module was developed using Socket.IO, NodeJS and MySQL as the database.

Login and Authentication Module

- Development of login and authentication module using JWT tokens in MEAN stack.

Projects

Emojifier: Android application which integrates Googles Mobile Vision for facial recognition in an image and augment an appropriate emoji which resembles the facial expressions.
Sunshine: Android application which displays latest weather obtained by consuming OpenWeatherMap APIs.
NewsReader: Android application which consumes NewsAPI webservices for latest news and displays according to their categories.
